

In the Drawings

Please amend FIG. 6 as indicated in red on the attached copy.

In the Claims

Please amend the following claims as indicated by deleting the bracketed portions and by inserting the underlined portions:

B3/B1/D1 1. (Twice Amended) In an integrated computer telephony system including a call routing system, a method for routing a call based on the identity of an originating source of said call, comprising the steps of:

maintaining a plurality of routing lists, each of said routing lists being associated with at least one originating source and each routing list comprising a plurality of directory numbers;

receiving said call from said originating source;

selecting a routing list associated with said originating source from said plurality of routing lists; and

directing said call sequentially to the directory numbers on [according to] said routing list.

B3
10/13
5. (Twice Amended) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

B4
maintaining a plurality of routing lists, each said routing list being associated with at least one originating party and at least one personal number and each routing list comprising a plurality of directory numbers;

receiving a communication directed to a personal number from an originating party;

selecting a routing list associated with said personal number and said originating party; and

routing said call sequentially to the directory numbers on [in accordance with] said routing list.

B5
14. 8
11
(Once Amended) The method of claim 11 [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the day of the week said communication is received.

B5
Amended
15. ~~q.~~ (Once Amended) The method of claim ~~5~~¹ [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the time of day said communication is received.

16. ~~q.~~ (Once Amended) The method of claim ~~5~~¹¹ [7], wherein said selecting a routing list step further comprises selecting said routing list from a group of routing lists identified for said originating party based on the day of the week and the time of the day said communication is received.

B6
B5
D4
11
(Twice Amended) A computer system for routing calls for a personal number subscriber based on the calling line identification of an originator, comprising:

a processing unit;

a memory storage device operative to store a plurality of routing lists for said personal number subscriber, each said routing list comprising a plurality of directory numbers;

a receiving interface device coupled to said processing unit for receiving calls;

a transmitting interface device coupled to said processing unit for placing calls;

said processing unit being operative to:

receive a call on said receiving interface device, said call being directed to said personal number subscriber;

detect a calling line identification for said originating party;

retrieve an associated routing list from said memory storage device for said calling line identification;

retrieve a default routing list from said memory storage device if said associated routing list does not exist; and

direct said call setup request sequentially to the directory numbers on [in accordance with] said routing list.

B7 ~~Sub CDS~~ 13. (Twice Amended) A computer-readable medium on which is stored a computer program for selecting a routing list and directing a call based on an identifying criteria, and a data file containing a plurality of routing lists for a called party, wherein each routing list comprises a plurality of directory numbers, said computer program comprising instructions which, when executed by a computer, perform the steps of:

receiving a communication for said called party;

obtaining said identifying criteria from said communication;

retrieving a routing list from said data file based on said identifying criteria; and

directing said communication sequentially to the directory numbers on [in accordance with] said routing list.

Please add new Claims 17 - 24 as follows:

B8 ~~Sub C1~~ 17. (New) The method of claim 1, wherein said selecting a routing list step further comprises the steps of:

requesting said originating source to provide speech sample;

receiving said speech sample;

retrieving an associated routing list for said speech sample; and

retrieving a default routing list if said associated routing list does not exist.

18. (New) The method of claim 5, wherein said selecting a routing list step further comprises the steps of:

requesting said originating party to enter a speech sample;

receiving said speech sample;

retrieving an associated routing list for said speech sample and said

personal number; and

retrieving a default routing list if said associated routing list does not exist.

19. (New) In an integrated computer telephony system including a call routing system, a method for routing a call based on the identity of an originating source of said call, comprising the steps of:

maintaining a plurality of routing lists, each of said routing lists being associated with at least one originating source;

receiving said call from said originating source;

selecting a routing list associated with said originating source from said plurality of routing lists by

requesting said originating source to provide an identification code;

receiving said identification code;

retrieving an associated routing list for said identification code;

and

retrieving a default routing list if said associated routing list does not exist; and

directing said call according to said routing list.

20 (New) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

BS
BC
mt
maintaining a plurality of routing lists, each said routing list being associated with at least one originating party;
receiving a communication directed to a personal number from an originating party;
selecting a routing list associated with said personal number and said originating party by
requesting said originating source to provide an identification code;
receiving said identification code;
retrieving an associated routing list for said identification code;
and
retrieving a default routing list if said associated routing list does not exist; and
routing said call in accordance with said routing list.

21. (New) In a program module responsive to receiving communications for a personal number subscriber, a method for routing a communication to said subscriber, comprising the steps of:

maintaining a plurality of routing lists, each said routing list being associated with at least one originating party;

receiving a communication directed to a personal number from an originating party;

selecting a routing list associated said originating party based on the time of the call; and

routing said call in accordance with said routing list.

22. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the day of the week said communication is received.

23. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the time of day said communication is received.

24. (New) The method of claim 21, wherein said selecting a routing list step further comprises selecting said routing list based on the day of the week and the time of the day said communication is received.

REMARKS

Claims 1-16 have been rejected by the Examiner. By the present amendment, Claims 1, 5, 8 - 11, and 13 have been amended. No claims have been cancelled. New Claims 17 - 24 are presented for entry. Consequently, upon entry of the present amendment, Claims 1 - 24 will be
